Philadelphia, PA | Anmolbrahmbhatt1310@gmail.com | (209) 313-8516 | [LinkedIn](#)

SUMMARY

Software Engineer with 3+ years of experience supporting and developing custom IT applications in enterprise environments. Skilled in PL/SQL (procedures, triggers, analytical functions, performance tuning), Python scripting (Pandas, DataFrames), and supply chain support workflows. Adept at root cause analysis, query optimization using AWR/Hints, and resolving high-priority production issues in a global, distributed support model. Proven ability to collaborate with onsite-offshore teams, follow ITIL support practices, and deliver reliable solutions under tight SLAs.

PROFESSIONAL EXPERIENCE

Software Engineer – Vality Engineering LLC | Remote (India → US)

March 2022 – Present

- Developed and maintained **PL/SQL procedures, packages, triggers, and hierarchical queries** for supply chain and business analytics systems.
 - Tuned slow-performing queries using **EXPLAIN PLAN, AWR reports, and optimizer hints**, achieving up to **70% reduction in execution time**.
 - Created **Python scripts using Pandas** to automate data ingestion, cleansing, and transformation for internal operations.
 - Integrated **Oracle DB with Python-based ETL pipelines** for real-time reporting and inventory forecasting tools.
 - Worked in a **24/7 global support model**, addressing incidents, bugs, and performance bottlenecks with minimal escalation.
 - Maintained clear documentation for change management, version control, and rollback plans to ensure support compliance.
 - Delivered proactive fixes and communicated directly with business users to gather feedback, resolve issues, and confirm incident closures.
-

PROJECT HIGHLIGHTS

AI-Powered Restaurant Analytics Platform

AWS Glue, Redshift, S3, Python, Terraform, n8n, GPT-4

- Built automated ETL workflows using **AWS Glue** and **S3 event triggers** to consolidate structured and semi-structured data.
- Enabled daily analytics dashboards via Redshift & Athena, integrating with GPT-4 for natural language summaries.
- Deployed infrastructure via **Terraform**, orchestrated reporting and alerting workflows using **n8n** and AWS SES.

Supply Chain Optimization Dashboard

Oracle PL/SQL, Python, Pandas, Excel Reporting

- Automated monthly reporting by developing stored procedures and linking to Python scripts for data export.
- Implemented **performance-tuned queries** with window functions, group-by aggregations, and dynamic filters.

Inventory Forecasting System

Oracle, Python (Pandas, NumPy), FastAPI

- Built back-end API using Python to read from **Oracle PL/SQL procedures** and serve live inventory metrics.
 - Used **Python DataFrames** for transformation and cleaning, reducing manual reporting efforts by 80%.
-

EDUCATION

M.S. in Computer Science – Rowan University (GPA: 3.41) – *May 2025*

B.E. in Computer Engineering – Gujarat Technological University (GPA: 3.81) – *May 2023*

TECH STACK

- **Languages:** Python, SQL, PL/SQL, Java, Bash
 - **Databases:** Oracle, PostgreSQL, MySQL, Cosmos DB
 - **Scripting & Libraries:** Python (Pandas, NumPy), FastAPI, Shell
 - **Performance Tuning:** AWR Reports, Optimizer Hints, Execution Plans
 - **Support Tools:** ITIL Practices, Change Management, Incident Tracking
 - **Other Tools:** Jenkins, Docker, Git, Jira
 - **Environment:** Global Delivery, Onsite-Offshore Coordination, On-call Support
-

CERTIFICATIONS

- Machine Learning & Deep Learning (Python & R)
- Selenium with Java – Test Automation Framework
- Master Python with NumPy for Data Science
- Google Chrome Extension Development
- Agile Software Development
